HACKERS DO BEM

FUNDAMENTAL - TURMA 20

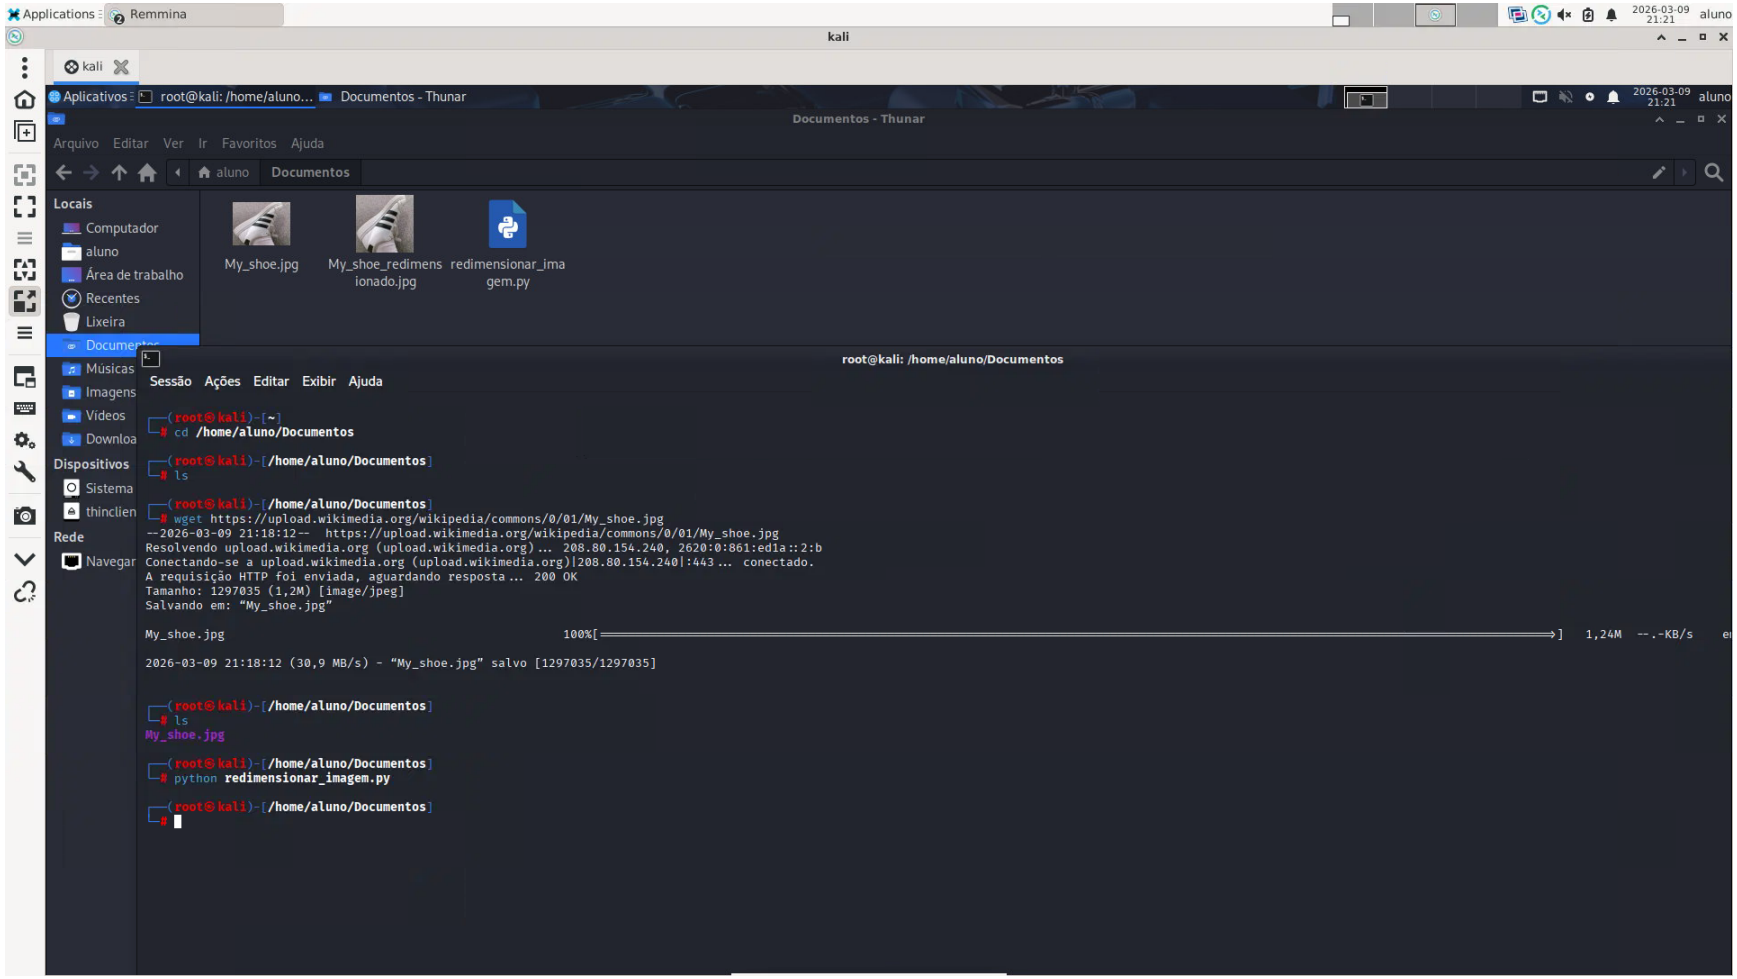
Aluno : Caio Dos Santos Leal

MÓDULO 6

ATIVIDADE PRÁTICA 1

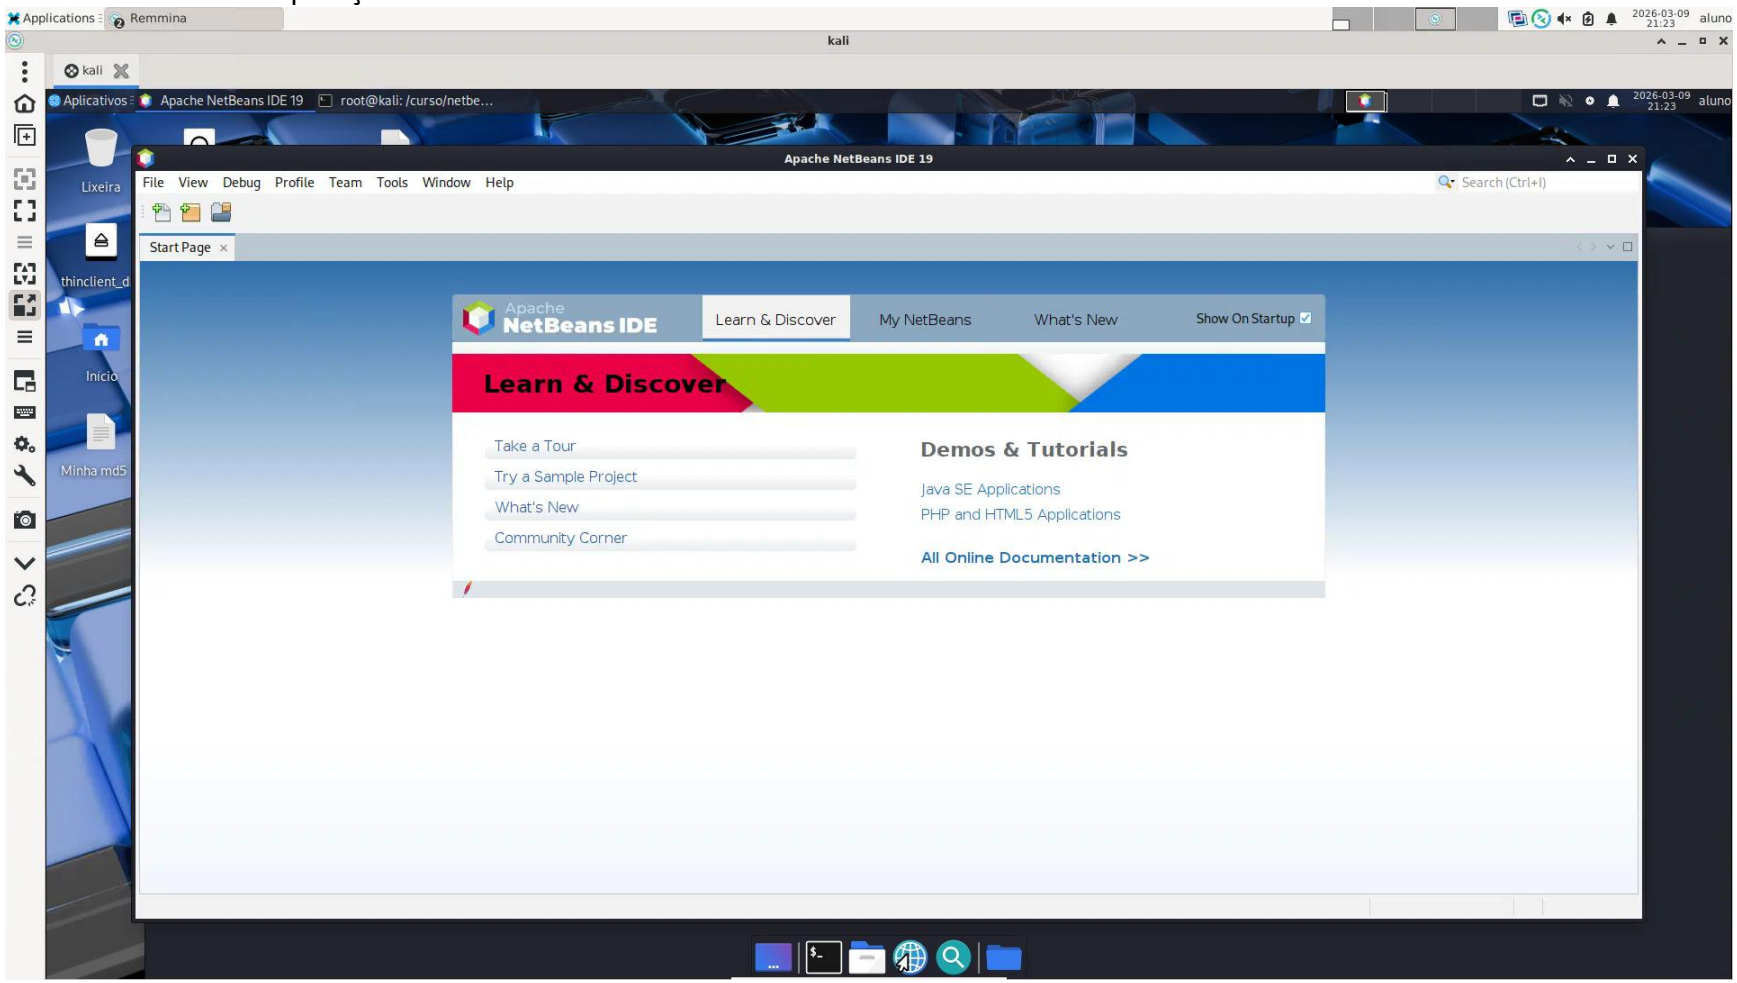
Atividade 6.1: passo 8

Execução do script Python **redimensionar_imagem.py** no Kali Linux, demonstrando o reuso de código utilizando a biblioteca Pillow para redimensionar a imagem *My_shoe.jpg*, gerando o arquivo **My_shoe_redimensionado.jpg**.



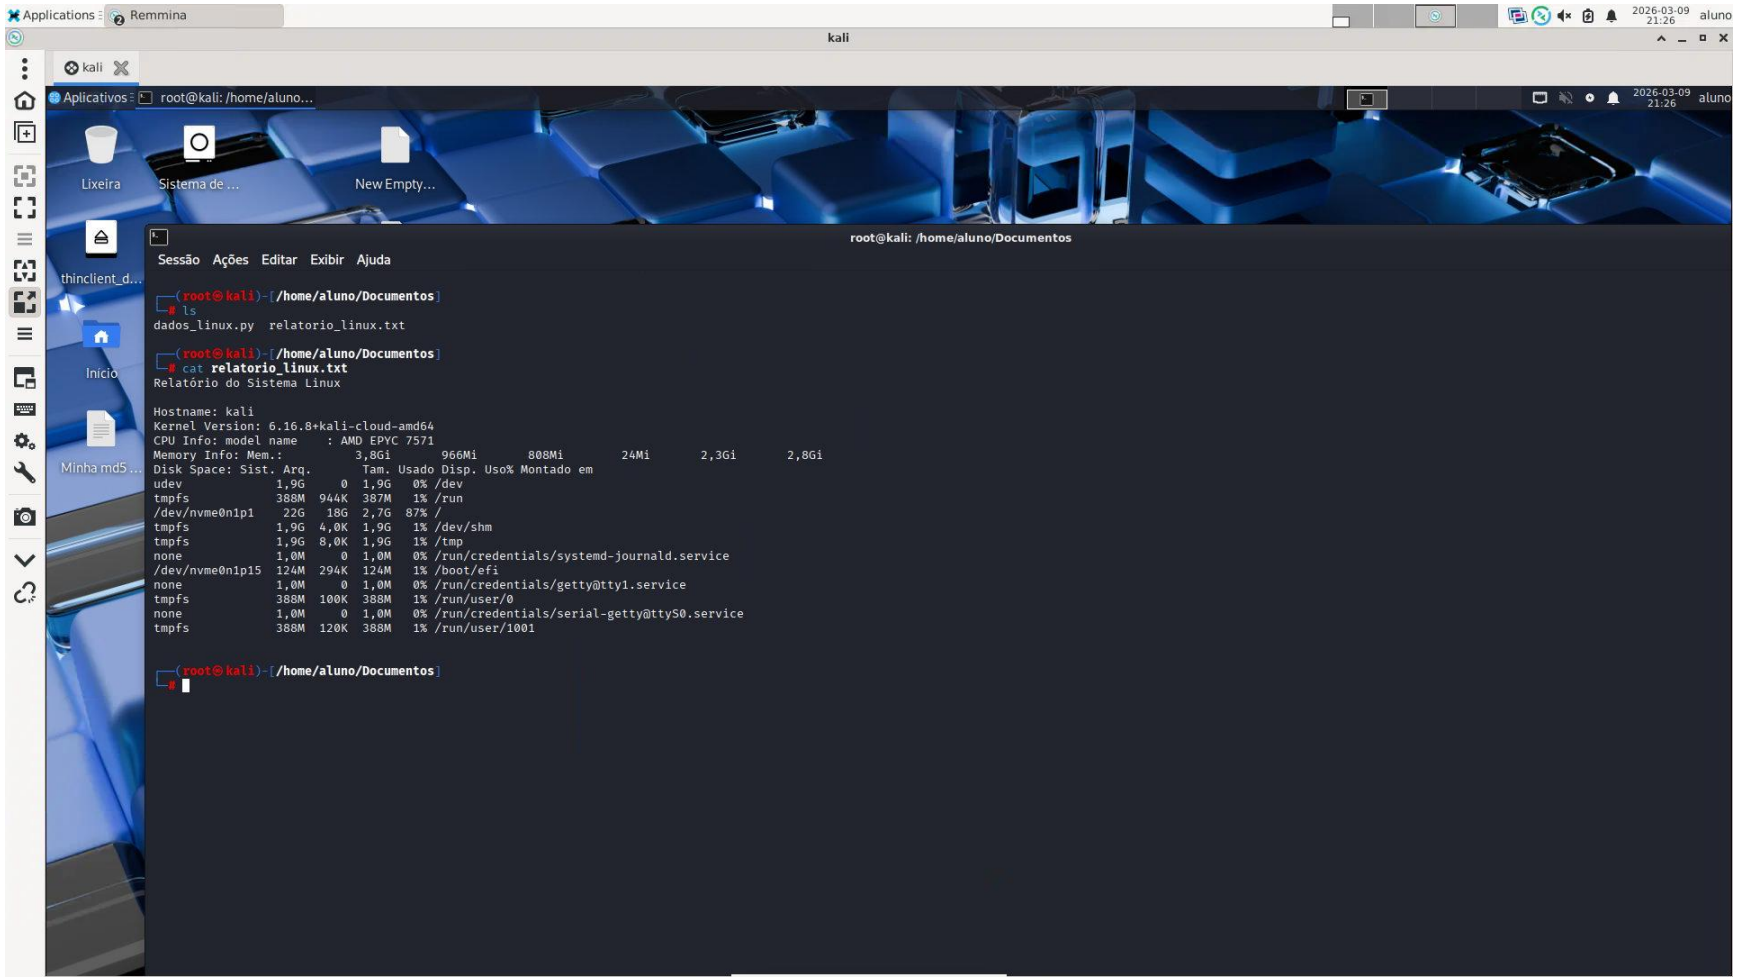
Atividade 6.2: passo 7

Inicialização do **Apache NetBeans IDE** no Kali Linux após a instalação do pacote **apache-netbeans_19-1_all.deb**, permitindo o desenvolvimento de aplicações Java utilizando o JDK instalado no sistema.



Atividade 6.3: passo 8

Execução do script **dados_linux.py**, responsável por automatizar a coleta de informações do sistema Linux e gerar o arquivo **relatorio_linux.txt** contendo detalhes de hardware e sistema operacional.



Atividade 6.4: passo 6

Consulta da vulnerabilidade **CVE-2017-12099** presente na base de assinaturas do antivírus ClamAV, observando que o exploit associado utiliza o tipo de ataque **Integer Overflow**.

Vulnerability Details : CVE-2017-12099

Potential exploit

Blender 2.78c Legacy Mesh Attribute 'tface' Integer Overflow Leads to Code Execution via Malicious .blend File

An exploitable integer overflow exists in the upgrade of the legacy Mesh attribute 'tface' of the Blender open-source 3d creation suite v2.78c. A specially crafted .blend file can cause an integer overflow resulting in a buffer overflow which can allow for code execution under the context of the application. An attacker can convince a user to open the file or use it as a library in order to trigger this vulnerability.
